

QUALITY POLICY STATEMENT

Global Advanced Metals produces tantalum concentrates and tin at the Greenbushes Operations.

Our objective is, in the most cost effective manner, to:

- Provide a safe working environment for all of our employees, contractors and visitors;
- Minimise the impact of the operations on the local community and environment;
- Produce consistent products that meet our customers' requirements in respect to the desired grades, quality and delivery;
- Meet all legal and other requirements.

To achieve this objective and to continually improve the quality of our products and services, we have implemented an Integrated Management System. This system incorporates Environmental, Occupational Health and Safety, Maintenance, Human Resources and Quality Systems. The site is certified by Bureau Veritas to ISO 9001:2015 and AS/NZS ISO 14001:2015. The scope of certification covers:

Management of mining operations by Talison; processing, storage and shipment of tantalite concentrates and tin.

Management is committed to providing leadership and resources at all levels of the company to ensure the objective is met.

We acknowledge that it is the responsibility of all personnel to be committed to ensuring the effective management and implementation of this system and to encourage its continued improvement.

Through reporting, analysis and follow up of discrepancies and opportunities we aim to continually improve the effectiveness of the system and consequently the performance of the operation.

Max McGarvie
Executive General Manager – Resources
